SUMMARY

AI engineer with over three years of experience at Qatar University and Weill Cornell Medicine - Qatar. Work spans AI and machine learning, large language models (LLMs), computer vision, web applications, and wearable haptics.

EXPERIENCE

Qatar University
Sep. 2026 - Present

Wearable Haptics Research

- Build an improved haptic glove based on the earlier prototype, integrating ESP32 microcontrollers, IMUs, actuators, and supporting electronics.
- Develop AI-driven training simulations in Unity with haptic feedback from the glove.

Weill Cornell Medicine - Qatar
Oct. 2023 - Jul. 2026

AI Research Specialist

- Pretrained D3, a language model with about 70 million parameters for predicting drug-interaction severity, and compared it with larger models.
- Built MERA, a retrieval-augmented assistant for clinical records, with question answering, summarization, and similar-case search.
- Developed TriAgent, a multi-agent system for clinical decision support when patient information is incomplete.
- Collected, cleaned, curated, and annotated clinical text and 2D/3D medical imaging datasets for training and evaluation, including data gathered through web scraping.
- Trained multimodal models for visual question answering and medical report generation.
- Connected hosted and open-source models to backend APIs and deployed AI applications on Azure.

Qatar University
Oct. 2023 - Dec. 2023

Research Assistant, Department of Mathematics, Statistics and Physics

- Trained and compared deep learning models for stroke-lesion segmentation in MRI scans; contributed to the resulting publication.

Qatar University
Jun. 2023 - Oct. 2023

Research Assistant, Department of Computer Science and Engineering

- Built haptic-device prototypes and MATLAB and Unity simulations to compare feedback mechanisms.

PRODUCT DEVELOPMENT

FraMee - AI Photo & Video Discovery Startup
Built face-recognition and video-highlight pipelines with InsightFace, FAISS, and FastAPI, connected to a Next.js app and containerized cloud jobs.

Kallos Fitness - Web & Mobile Platform
Developed a bilingual Next.js platform and React Native app for scheduling, memberships, and attendance, with Supabase access control and Docker deployment on Cloud Run.

EDUCATION

Qatar University
Jan. 2019 - Jun. 2023

B.Sc. in Computer Engineering

SKILLS

Programming: Python, TypeScript, SQL, C++, R, MATLAB
Machine learning: PyTorch, Hugging Face, LLM fine-tuning, embeddings, evaluation
LLM applications: LangChain, LangGraph, LlamaIndex, RAG, tool calling, REST APIs
Deployment & MLOps: Azure (AI Foundry, AI Search), Google Cloud, Docker, CI/CD, MLflow, Git
Languages: Arabic (native), English (fluent)
Awards: Health Hackathon winner; runner-up, Senior Design Project Contest and Capstone Design Competition
